## White Paper – Kmushicoin

O meio ambiente percorre um caminho desafiador para preservar a vida das gerações futuras. A Tierra Viva, Bioabonos y Medio Ambiente S.A.S., dedicada à transformação de resíduos orgânicos usando besouros, nasceu de uma coincidência e há mais de duas décadas desenvolve tecnologias ambientais para mitigar o impacto do homem, em conformidade com os Objetivos de Desenvolvimento Sustentável da ONU.

Em 2019, criamos a Kmushicoin, uma criptomoeda com seu próprio blockchain, com o objetivo de estabelecer um mecanismo de pagamento alternativo que beneficiasse o meio ambiente, que rapidamente ganhou impulso para se tornar um dos principais ativos de investimento regionais que geram benefícios tangíveis na economia circular e no desenvolvimento sustentável.

### What differentiates us?

A Kmushicoin não se concentra apenas na digitalização de transações financeiras, mas também na restauração de ecossistemas danificados pelo desmatamento, com base no trabalho vital que mais de 375.000 espécies de besouros realizam em todo o planeta. Portanto, a criptomoeda Kmushicoin não é apenas um meio de transação, mas também um mecanismo de investimento que apoia o meio ambiente.

A Kmushicoin é uma fusão de inovação financeira e responsabilidade ambiental. Desde a sua criação, essa criptomoeda atraiu o interesse de investidores de mais de 80 países e, atualmente, estamos em constante progresso para nos posicionarmos como líder regional no campo do Blockchain.

### Nossa blockchain

De 2019 a 2023, a Kmushicoin adotou uma blockchain híbrida proprietária, combinando prova de trabalho (PoW) e prova de participação (PoS). Durante esse período, o rendimento da mineração PoS atingiu impressionantes 16% ao ano. Com um suprimento total de 20 milhões de Kmushicoins, a pré-mineração de nossa primeira blockchain foi igual a 20%.

No entanto, em setembro de 2023, evoluímos para uma nova fase ao desenvolver um blockchain que adota um modelo de Prova de Participação (PoS) e Masternodes. Esse novo sistema fornece 1,48 moedas por bloco, beneficiando os Masternodes com 56% das moedas. Para essa transição, fizemos uma pré-mineração de 6,3 milhões de moedas, das quais 4 milhões fazem parte da pré-mineração e o restante facilita a troca automática entre a rede antiga e a nova.

Nosso crescimento e evolução nos levaram da compostagem para nos tornarmos um provedor de infraestrutura de blockchain baseado em sustentabilidade. Esperamos que este white paper forneça uma imagem mais clara de nossas operações, nossa visão e o valor exclusivo que a Kmushicoin oferece ao mundo.

## SPECIFICATIONS:

**ALGORITHM: QUARK**

**NAME: KMUSHICOIN.**

**LABEL: KTV.**

**COINS PER BLOCK: 1.48 KTV.**

**PRE-MINED: 20% (4,000,000).**

**TOTAL COINS: 20,000,000 (KTV).**

**MATURITY: 100 BLOCKS.**

**TIME PER BLOCK: 60 SECONDS.**

**BLOCK TYPE: PROOF-OF-STAKE**

**ADDRESS LETTER: K**

**RPC PORT: 36600**

**P2P PORT: 36599**

It was born as an idea to take advantage of technological innovation and digital advances to use them to help the environment as the use of cryptocurrencies that today have taken over the market and its volume and use for common transactions and as a means of saving and investment, improving the economy of people and based on this search for economic improvement is born the idea of Kmushicoín, a cryptocurrency backed by a pro-environmentalist company "Tierraviva compost and environment Sas." Its purpose and work is to receive tons of organic waste produced daily by people in their lives and daily work, and converted into 100% organic fertilizer through natural process by ZOO beetle breeding who process all the waste and turn it into fertilizer, high quality at a low cost, this unique process on the planet was discovered and patented by scientific research conducted by Eng. German Viasus tibamoso, founder of tierraviva.

It is not only fertilizers but also has all the permits for the export of live dry beetles to countries belonging to the American continent, Europe and mainly to the Asian continent, highlighting as the main one "Japan".

Kmushicoín's mission, to use as a method of investment and trade, and every time a purchase, sale or investment operation is made, part of it will be invested in pro-environmental working capital, which will not only help to protect and improve the environment, but also strengthen Kmushicoín and increase its initial investment value.

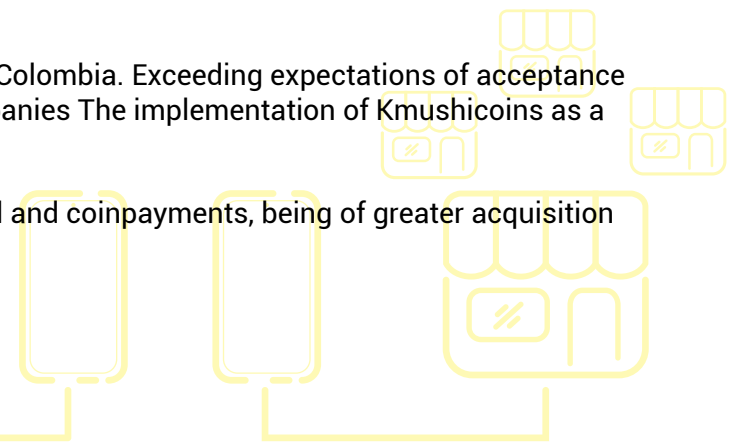

Your initial investment would always be available for your withdrawal at the current value at the time of withdrawal, that is, if your initial investment was 1 usd and its value increases to 2 usd, you will receive 2 usd, and not 1 usd of your investment.

Kmushicoín, is the first cryptocurrency backed by a company with 19 years of uninterrupted work and merits in the pro-environmental field and merit of honorary work in Japan.

Its Launch held on August 24, 2019, More than 70mil Kmushicoíns were sold, in its First Official Kmushi pre-sale being 200.000. KTV, its Start to the sale leaving availability of a Total to date August 30, 2019, of 130,000 KTV, Available for sale by that date.

The acceptance by the population of Tunja in Boyacá, Colombia. Exceeding expectations of acceptance of Kmushicoín Achieving partnerships with local companies The implementation of Kmushicoíns as a method of payment for products and services.

Obtaining them through local currency through pay pal and coinpayments, being of greater acquisition through paypal and payment in local currency.
